

PARK JUNGHO (Kyle) - CV

Blockchain & Backend Engineer | Quantitative Trading Systems

Builds trading systems (Rust/Go), blockchain infrastructure, and production tooling end to end. Currently Developer Relations Engineer at Mantle Network, where the output has been a 14-module content pipeline, five Korean technical documents, and hands-on developer onboarding.

PROFESSIONAL EXPERIENCE

Mantle Network

Developer Relations Engineer | Apr 2026 - Present

Tech Stack: TypeScript, Next.js, PostgreSQL, Solidity

- **Sole designer and implementer of the Korea team's content operations pipeline, deployed to the team — 14 modules, 276 source files, 209 test files**
 - X/Lark collection, Korean translation, per-channel conversion, two-stage human review, Telegram/X/PR delivery — [mantle-kr-herald](#)
- **Sole author of the Korean technical documentation set — 5 documents**
 - Mantle block explorer (beginner and deep-dive editions), a DEX comparative deep dive, an AI agent trading path guide, and an asset-withdrawal guide. The deep-dive edition covers modular architecture, Rollup vs. Validium classification, L2's dual gas structure, and why Mantle sits at L2Beat Stage 0 — [Docs hub](#)
- **Designed and delivered hands-on technical onboarding curriculum**
 - Mantle infra setup, Bybit API, Byreal Skills CLI, MerchantMoe/Agni/Fluxion integrations, testnet contract deployment labs, and a live-built stablecoin pair-trading bot
- **Owned Korea builder onboarding for The Turing Test Hackathon 2026**
 - Built the Korean builder funnel across the full 6-week registration-to-submission window of Phase 2, in a \$120K two-phase global flagship program. An offline co-working session, the Seoul hacker house workshop (100+ builders), a live online workshop, and 3 external partner events
- **Ran a 7-university blockchain-club campus tour as sole speaker, completed in 3 weeks**
 - KAIST, Korea University, Sungkyunkwan, Ewha Womans, Ajou, Inha, Kwangwoon. Four clubs published their own session recaps unprompted, and one-off visits turned into standing partnerships
- **Ran the Korean official account — 221 posts, 175K impressions, 1.84% engagement rate (1.4× the global account's 1.28%)**
 - Korea-originated campaigns and event announcements took all six highest-reach slots

Kronon Labs Co., Ltd.

Trading System Backend Engineer | Apr 2025 - Nov 2025 (8 months)

Tech Stack: Go, Rust, Python, AWS, Docker

- **CEX Cross-Exchange Arbitrage System**
 - Architected and deployed Taker-Taker and Maker-Taker arbitrage strategies, plus a dashboard tracking PnL and positions in real time

- **Solana DEX Trading Infrastructure**
 - Built on-chain trading bots implementing in-house alpha strategies (New Pair Detection, Back From The Dead, Fat LP Analysis)
- **Trading Metrics & Analytics Platform**
 - Designed a metrics collection framework reused across strategies, with real-time visualization and performance analysis on infrastructure handling 10k+ data points per second
- **AI-Powered Sentiment Trading System**
 - Built a sentiment analysis engine that collects news feeds, KOL tweets, and Telegram channels, and turns them into trading signals via LLM agents
- **Exchange Listing Sniper Bot**
 - Implemented a monitoring system detecting new token listings across major exchanges, with sub-second order execution

Medium Inc.

Backend Engineer | Sep 2022 - Feb 2024 (1 year 6 months)

Tech Stack: Go, TypeScript (NestJS), Hyperledger Fabric, AWS, GCP, Docker

- **Cross-Chain Bridge Infrastructure**
 - Developed a bridge protocol connecting company L1 mainnet with private consortium chain, handling asset transfers and state synchronization
- **Security Token Platform (ERC-1400)**
 - Implemented STO infrastructure on Hyperledger Fabric for regulated digital securities issuance, following the ERC-1400 standard
- **Cryptocurrency Wallet Service**
 - Built a production wallet API supporting multi-chain assets, with HSM integration and security controls

BF Labs Inc.

Backend Engineer | Aug 2022 - Sep 2022 (2 months)

- **Government Research Project**
 - Contributed to IITP (Institute of Information & Communications Technology Planning & Evaluation) funded blockchain research initiative, developing core API infrastructure

SELECTED PROJECTS

mantle-kr-herald — Content Operations Pipeline (Mantle KR)

Tech Stack: TypeScript, PostgreSQL, Vercel, Vitest

<https://github.com/kyle-park-io/mantle-kr-herald>

- Sole designer and implementer of the Korea team's content operations pipeline, deployed to the team. **14 modules**, 276 source files, 209 test files
- Translation and conversion run **agent-in-the-loop**: a local coding agent fills a purpose-built worksheet and a human approves the result, behind two mandatory approval gates
- Migrated the record of truth from files to **PostgreSQL and shipped it serverless on Vercel** so reviewers approve and publish from a browser. Persistence sits behind a port in a **hexagonal structure**, so swapping the store stayed at the adapter level. File-lock serialization does not survive serverless, so a dropped ledger row could republish a live post twice; a unique index closes that hazard
- **Translation memory** mines both official accounts and feeds only human-approved EN↔KO pairs into the few-shot set

Binance Triangular Arbitrage System

Tech Stack: Rust, FIX Protocol, SBE (Simple Binary Encoding)

- High-performance triangular arbitrage engine using FIX and SBE for ultra-low-latency execution, with real-time opportunity detection across multiple Binance pairs

Polymarket & Crypto Prediction Markets

Tech Stack: Go

- Prediction-market arbitrage, 15-minute crypto momentum trading on sub-\$1 mispricings, and sentiment-driven directional strategies

AWARDS & CERTIFICATIONS

- **1st Place - Mantle Global Hackathon 2025** | Feb 2026
 - DeFi & Composabilities Track Winner
 - Project: DOOR Protocol
- **3rd Place - Seoulana Hackathon 2025** | Apr 2025
 - Solana blockchain development competition
- **Engineer General Machinery** | Dec 2020
 - Issued by Human Resources Development Service of Korea (HRDK)

LEADERSHIP & RESEARCH

Oracle — KAIST-based Blockchain Research Society

Vice President (8th Cohort) | Mar 2026 - Present

Team Leader, ODA Team (7th Cohort) | Sep 2025 - Feb 2026

- Society operations and program direction. Currently organizing the 8th cohort's final research conference (Sep 2026, Hana Bank Lounge, Samseong)
- **Sole author of the 7th cohort's five published DeFi research papers** (CC BY 4.0) — <https://github.com/oracle-7th-sda/conference-pdf>
 - Comprehensive stablecoin depeg survey across CEX venues (2018 - Feb 2026) and on-chain venues (2022 - Feb 2026), by venue, magnitude, cause, and duration
 - Solana searcher/solver strategy design. Six strategy families for real-time depeg arbitrage on Jito bundles, Jupiter v6, and Helius WebSocket
 - Plus a 17-category DeFi ecosystem taxonomy and a cross-category stablecoin map

TECHNICAL SKILLS

- **Languages:** Rust, Go, Python, TypeScript
 - **Backend Frameworks:** NestJS, Next.js, Gin, Fx
 - **Blockchain:** Solidity, Solana (Rust), Move, Hyperledger Fabric
 - **Frontend:** React, SolidJS
 - **Infrastructure:** AWS, GCP, Docker, Kubernetes, PostgreSQL, Vercel
 - **Specializations:** Financial Market Protocols, DeFi Protocols, DEX/CEX Trading Systems, High-Frequency Trading, Medium-Frequency Trading, Cross-Chain Bridges, Internal Tooling & Workflow Automation, Agent-in-the-Loop Pipeline Design, Technical Writing
-

EDUCATION

Kyung Hee University, Seoul

Bachelor of Engineering in Mechanical Engineering | Mar 2014 - Aug 2022

LANGUAGES

- English:** Intermediate-High (TOEIC Speaking Level 6, 150/200)
- Korean:** Native
